VISIBLE EMISSION NOTATIONS

Inspector: <i>R Long</i>		
Date of Inspection: <i>10/1/15</i>		
Shift: <input checked="" type="radio"/> 1st Shift or <input type="radio"/> 2nd Shift Time: <i>9 AM</i>		
Unit	Visual Inspection <u>NORMAL</u> or <u>ABNORMAL</u>	Comments
Visible Emission From Shaker	<i>NOR</i>	
Visible Emission From Discharge Conveyor System	<i>NOR</i>	

Normal means emissions prevailing or expected to prevail 80% of time process in operation, not counting start up or shut down

- Visible inspection must be performed during daylight operations and during the part of operations that would normally be expected to cause the greatest emissions. A trained employee shall record whether emissions are normal or abnormal.
- Opacity is a measure of the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.
- A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- If abnormal emissions are observed, the Permittee shall take reasonable response steps to restore the operations and emissions to its normal or usual manner of operation and emission appearance. Failure to take steps to restore the operations is a deviation from the permit.
- Facility must record the response steps taken to restore operations and visible emissions. (C.13)

Normal means emissions prevailing or expected to prevail 80% of time process in operation, not counting start up or shut down

- Visible inspection must be performed during daylight operations and during the part of operations that would normally be expected to cause the greatest emissions. A trained employee shall record whether emissions are normal or abnormal.
- Opacity is a measure of the degree to which emissions reduce the transmission of light and obscure the view of an object in the background.
- A trained employee is an employee who has worked at the plant at least one (1) month and has been trained in the appearance and characteristics of normal visible emissions for that specific process.
- If abnormal emissions are observed, the Permittee shall take reasonable response steps to restore the operations and emissions to its normal or usual manner of operation and emission appearance. Failure to take steps to restore the operations is a deviation from the permit.
- Facility must record the response steps taken to restore operations and visible emissions. (C.13)
